

Roja Mogili

Senior Full Stack Developer

Full-Stack Developer with 6+ years of experience building scalable web and enterprise applications across healthcare, manufacturing, finance, and enterprise platforms. Skilled in solution design, database architecture, API integration, cloud technologies, and AI-driven development. Experienced in end-to-end application development, team collaboration, performance optimization, and delivering secure, reliable solutions aligned with business needs.

EXPERIENCE

Evernorth Health Services (Cigna), Hyderabad - *Application Development Senior Analyst*

APR 2025 - PRESENT

Roles & Responsibilities: Gather and analyze requirements to design scalable application architecture and database solutions. Plan and assign tasks within the team to ensure timely delivery. Develop applications using modern technologies along with AI tools such as Cursor and GitHub Copilot to improve development efficiency. Coordinate user testing, incorporate feedback, and handle bug fixes, enhancements, and deployments while maintaining code quality, performance, and reliability.

USET Judging Platform (Rubric): An organization-wide event evaluation platform that streamlines hackathon and event management. Admins can create events, manage teams, and configure evaluation criteria, while teams can submit their details and hackathon projects with required information. Judges can securely log in, review team submissions, assign scores based on defined rubrics, and submit evaluations for transparent and efficient event judging.

Technologies Used: React, FastAPI, Okta Integration, PostgreSQL, Docker, OpenShift, CI/CD Pipeline, CRON Jobs, Github Actions, Cursor, Github Copilot

AI Usage Dashboard: An organization-wide AI usage analytics dashboard designed to track the adoption and usage of tools such as Cursor, GitHub Copilot, Devin, Claude, and other developer tools. It provides team-level and manager-level insights into usage metrics, Jira activity, token/session consumption, and associated costs. The dashboard helps organizations measure productivity improvements, analyze team performance, and optimize AI tool usage and spending.

Technologies Used: React, FastAPI, Okta Integration, PostgreSQL, Docker, OpenShift, CI/CD Pipeline, CRON Jobs, Github Actions, Cursor, Github Copilot

Claim Synthetic Data Generator ChatBOT: An AI-powered chatbot that generates realistic synthetic healthcare claims data based on user prompts while following HIPAA and data privacy standards. It creates synthetic member, provider, and claim information for testing and development, enabling users to generate customized data for various claim scenarios without using real patient information.

Technologies Used: Django, OpenShift, Docker, CI/CD Pipeline, AI Models GPT4o and GPT5, PostgreSQL, pgvector, RAG (Retrieval-Augmented Generation), OpenAPIs, LLM, GenAI, AI ChatBot, LangChain, LangGraph, Github Actions, Cursor, Github Copilot

ClaimUI: ClaimUI is a healthcare claims management platform that streamlines claim creation and processing while adhering to HIPAA compliance standards. It manages member and provider information, supports accurate claim generation and submission, and tracks claim status to efficiently handle accepted, rejected, and resubmission workflows.

Technologies Used: Angular, Django, Docker, PostgreSQL, Oracle DB, Okta Integrations, Form Builders, OpenShift, CI/CD Pipelines, Robot Framework, Github Copilot

Tech Vedika Software Pvt Ltd, Hyderabad - *Senior Software Engineer*

APR 2022 - APR 2025

Roles & Responsibilities: Architect and develop scalable web applications with clean, maintainable code, ensuring alignment with client requirements. Lead and mentor teams, conducting code reviews and integrating APIs, databases, and cloud services. Focus on optimizing performance, enhancing security, and maintaining compliance with industry standards.

Accushield Dashboard: Accushield is a visitor and entry management system designed for senior living communities, skilled nursing facilities, and hospitals. It streamlines visitor sign-ins, tracks third-party caregivers and vendors, and ensures compliance with credentialing standards. The platform enhances security, accessibility, and user experience through seamless integration of web and mobile features.

Technologies Used: Angular, Angular Material, Node.js, Expressjs, RabbitMQ, Redis, Docker, Jest, AWS Cognito, DynamoDB, AWS Lambda, CRON Jobs, Cognito MFA, PostgreSQL, DynamoDB, SAML Integrations, Salesforce Integrations, Form Builders

Connetin (Verbindung Geschäft pvt ltd.), Visakhapatnam - *Intern & Software Engineer*

DEC 2019 - APR 2022

Roles & Responsibilities: Architect and build scalable, high-performance web applications with clean, maintainable code. Mentor developers, conduct code reviews, and integrate APIs, databases, and cloud services in collaboration with cross-functional teams. Optimize performance, enhance security, and ensure compliance with industry standards.

Connetin: Connetin is a company website that provides a user-friendly platform with a secure authentication system, enabling users to register, log in, and access a dynamic product feed. The platform includes a career portal, employee information, and company details, along with functionality to store user addresses for billing.

Technologies Used: React, Typescript, Python, Django, Docker, CI/CD Pipeline, Jest, Jenkins, GCP, Kubernetes, MySQL, nginx, Load Balancer

ConnetinBot: ConnetinBot is a comprehensive solution for cylinder manufacturing, tracking the entire process from raw material procurement to manufacturing stages and sales. It ensures seamless production monitoring and management.

Technologies Used: Angular, RxJS, Primeng, Node.js, Trail.js, NestJS, Python, Django, RabbitMQ, Redis, keycloak, Celery, Jasper Reports(reporting tool), ZPL, Docker, CI/CD Pipeline, Jest, Jenkins, GCP, Kubernetes, MySQL and PostgreSQL.

BIS of ConnetinBot: The BIS Project is a quality testing application designed for cylinder certification. It facilitates test management and ensures compliance with BIS (Bureau of Indian Standards) quality standards.

Technologies Used: Angular, RxJS, Primeng, NestJS, Python, Django, Docker, CI/CD Pipeline, Jest, Jenkins, GCP, Kubernetes, MySQL and PostgreSQL.

SA: SA is a banking application for managing and verifying loan documents. It streamlines the process of document handling, improving accuracy and efficiency in loan operations.

Technologies Used: Angular, Node.js, express.js, Docker, CI/CD Pipeline,, GCP, Kubernetes, MySQL.

EDUCATION

6-Years Integrated B.Tech (Computer Science and Engineering)

Rajiv Gandhi University of Knowledge and Technologies, Nuzvid

2014 - 2020

CGPA: 8.58 (B.Tech)

8.20 (PUC)

SSC

Nirmala Girls High School, Vinukonda

2013 - 2014

CGPA: 9.7
